Insurance PAS – Side Navigation by Role (Angular)

Based on Insurance_App_BRD.pdf and Agent_Module_Documentation.docx

Overview

The BRD lists 6 to 10 roles, but the project now uses only 3: **Customer**, **Agent** and **Admin**. Underwriter, Claims Officer, Finance Officer, KYC Executive, Branch Manager and similar roles are folded into **Admin**, and Sales Executive into **Agent**. Each route prefix maps to a lazy-loaded Angular feature module (`/customer` , `/agent` , `/admin`).

Notes for Figma and Angular work

- **Shared screens** (Login, Register, 2FA, Notifications, Settings) sit outside the sidebar under `/auth`.

- **Guards:** use one role guard per prefix, and have the sidebar render from a role-based menu config array.
- **Agent module doc:** it only defines the Agents, Commission and Payout modules. Customer, Product, Quote, Claims and so on come from the BRD.
- **Policy Renewal** appears twice in the BRD (module 13 and inside Policy Servicing), so it has its own entry.
- **Investigation and Claim Settlement** (BRD modules 11 and 12) sit inside Admin → Claims.
